Validator

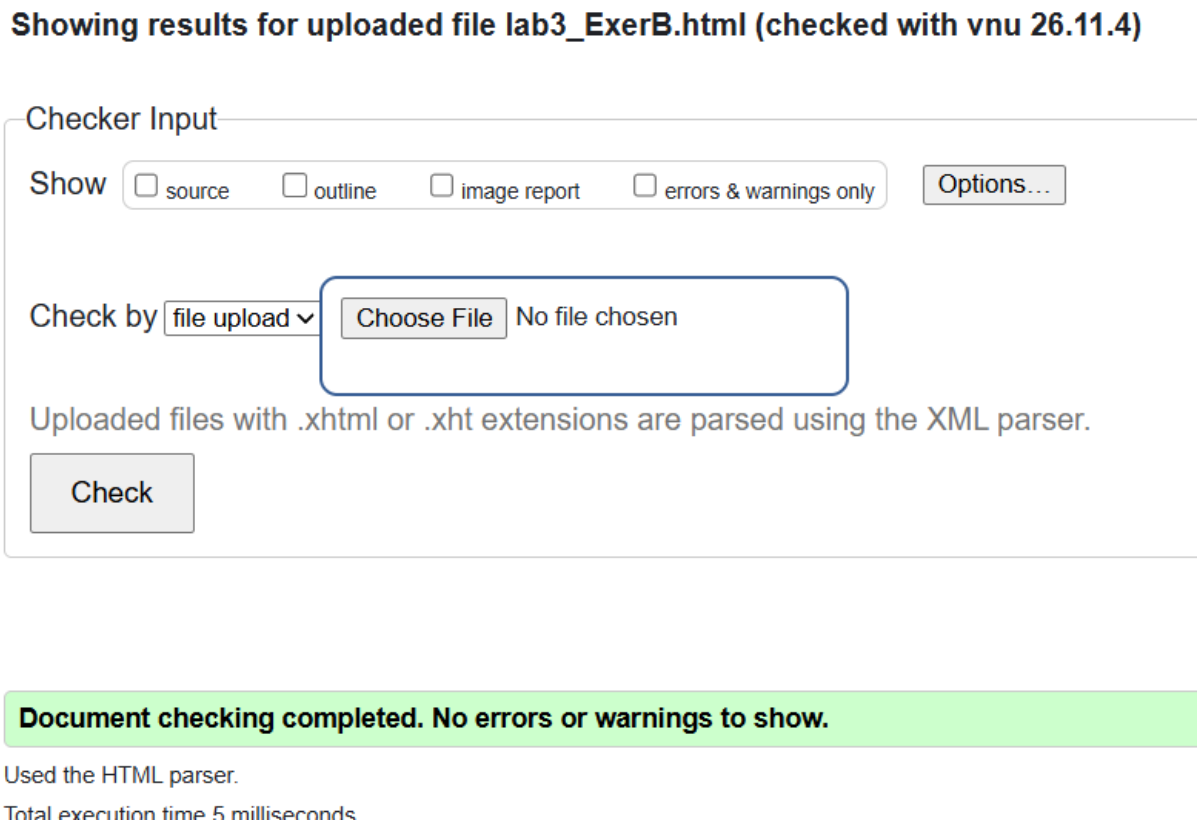

1. Exercise A

Testing:

The browser blocks form submission due to native HTML5 client-side validation. Focus is automatically placed on the first invalid required field ("Customer Name"), and a tooltip message appears such as "Please fill out this field." After reentering myemail into the email field, The browser rejects the submission because the input value "myemail" lacks the standard email format (missing an '@' symbol and a valid domain name). A browser popup error message appears indicating something like: "Please include an '@' in the email address. 'myemail' is missing an '@'".
